(i) Fund units and Net Asset Value distributable to Fund Unitholders

Fund units can be resold by Fund Unitholders to the Fund at any time in exchange for an equivalent amount of cash based on the Net Asset Value distributable to Fund Unitholders at the date before transaction date.

All Fund units issued to Fund Unitholders have the same rights with regard to voting right, dividends, redemption of capital and others. Each issued Fund unit carries one vote at annual general meetings of the Fund and is entitled to receive dividend as declared by the Fund from time to time.

Net Asset Value distributable to the Fund Unitholders also reflects the retained profits, share capital and share premium. In which, share capital includes subscription capital and redemption capital. 22. Financial risk management

The Fund has exposure to the following risks from financial instruments:

- credit risk;
- liquidity risk; and
- market risk.

This note presents information about the Fund's exposure to each of the above risks, the Fund's objectives, policies and processes for measuring and managing risk.

The Fund's investment portfolio comprises listed shares, unlisted shares and rights. The Management of the Fund Management Company has been given a discretionary authority to manage the Fund's assets in line with the Fund's investment objectives. Compliance with the target asset allocations, the composition of the portfolio is monitored by the Fund Management Company and the Supervising Bank on a weekly basis. In instances where the portfolio has diverged from the target asset allocations, the Management of the Fund Management Company is obliged to take actions to rebalance the portfolio in line with the established targets.

(a) Credit risk

Credit risk is the risk that counterparty to a financial instrument will fail to discharge an obligation or commitment that it has entered into with the Fund, resulting in a financial loss to the Fund. It arises principally from deposits with banks and receivables.

All call deposits and term deposits were placed with well-know financial institutions where the Board of Representatives approved and the Fund Management Company does not expect any losses arising from the non-performance of these financial institutions.

The Fund's listed securities, unlisted securities and rights will only be traded on or subject to the rules of the Ho Chi Minh City Stock Exchange and the Hanoi Stock Exchange or with counterparties which have a specified credit rating. All transactions in listed securities are settled or paid for upon delivery using approved brokers. The risk of default is considered minimal.

Receivables include receivables from disposals of investments, interests and dividends receivables. The Fund Management Company believes no allowance for doubtful debts was considered necessary for these receivables as at 30 June 2017 and 31 December 2016.

The maximum exposure to credit risk faced by the Fund is equal to the carrying amounts of deposits with banks and receivables.

(b) Liquidity risk

Liquidity risk is the risk that the Fund will encounter difficulty in meeting the obligations associated with its financial liabilities that are settled by delivering cash or other financial assets.

The Fund's approach to managing liquidity risk is to ensure that it will always have sufficient reserves of cash to meet its liquidity requirements in the short and longer term.

The Fund's financial assets as at 30 June 2017 and 31 December 2016 included mainly listed securities and cash in banks. The Fund's investments in listed securities are considered to be readily realisable as they are traded on the Ho Chi Minh City Stock Exchange and the Hanoi Stock Exchange. As a result, the Fund may be able to convert some of its investments into an amount of cash to timely meet its liquidity requirements.

(i) Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of the Fund's financial instruments will fluctuate as a result of changes in market interest rates. The Fund's exposure to market risk due to change in interest rates is minimal since all term deposits at banks have short-term maturities.

(iii) Market price risk

The Fund has mainly invested in listed securities that are affected by market price risk arising from the uncertainty in the fluctuation of the future market value of these securities. Market price risk is managed by the Fund Management Company by diversifying the investment portfolio and careful selection of securities within specified limits.

As at 30 June 2017, the market value of the Fund's listed securities is VND307,322,905,450 (31/12/2016: VND250,518,179,100).
